

BOSSystem™. The Retail Security Solution with all the benefits of being a stand alone solution, but the performance of a complete system.

The BOSSystem assists businesses to achieve higher profits by increasing sales and reduce shrinkage.

Its reliability, ease of installation, simplicity of operation and visual aesthetics contribute to the Touch, Feel and Play concept. It is proven that openly displayed products sell better than when they are hidden behind glass. In today's world no dummy products are displayed. The product features are to be experienced by the customer.

Creative Display.

The BOSSystem gives you the power to create superior looking displays. The only design limits are your imagination and creativity. You can design your display how you want it, and not having to design around security equipment. Whether it is mobile phones, MP3 players, GPS units, digital cameras or tablets, the BOSSystem will give power and security to the merchandise, enable the customer to explore and navigate it with a fully charged battery. At all times!

Using our Single Sensor Solution.

With our display magnet sensor, product and sensor are fixed and secured in their magnetic counterpart. No additional cables are required,

extra limpnet switches or separate long ugly charging cables to be attached to the product. Even then you have 3 point protection. The alarm is triggered if the sensor is removed, off the back of the product, by force. Secondly, our MPI2, electric current sensing technology, secures the power lead. And third, if any cable is cut or removed the alarm will sound. Furthermore, the security is virtually invisible. With our magnetic display solution, you will only see the product you want to display. The customer can easily pick up the product; the magnetic sensor will help getting it back in place. Your merchandise display will always look neat and tidy, and items are easy to handle.

The BOSSystem is a modular system which was developed to provide security for display of electronic devices in a retail environment.

The system is extremely reliable and can be customized to meet each store's individual requirements. All brands earn a market position by unique design, style and experience factor. Therefore it is essential that the display and security of products in the retail environment are in line with the brand. Also, it is crucial having a durable, smart, adaptable and interactive alarm system that you can count on and easily operate. With the BOSSystem you have it all!

The BOSSystem is so easy to operate. 1, 2, 3 steps and you have a working system.

Hour long service calls - to find the root of the problems - are history. The BOSSystem you can control with one card. This is all you need to service it; the system will do the rest. The microprocessor in the BOSSystem measures for any changes to the system 2000 times per second and charges all devices at the same time. Therefore, no dummy plugs are needed!

20 years in business

With more than 20 years in business SensorLine is an established company based in Denmark. SensorLine has affiliated companies in Sweden, Norway and distributors in many other countries around the world.

Other SensorLine solutions

As well as the BOSSystem described here SensorLine also offers, among others, the following products:

- Self powered A5 module
- Show Case Security Systems
- BOSSystem Interactive Media Box
- All in 1 Display Solutions

BOSSystem™
The best of both worlds...in me!
STAND ALONE & SYSTEM

BOSSystem™

Bus Operating Sensor System

plug
and
play

Features EuroAlarm A8:

- RFID Technology
- Fully protected against sabotage/tamper switch
- Adjustable volume control
- Multi-alarm
- Clear LED display with back-up lightning
- External device code
- Back-up battery
- Alarm is isolated only to the unit tampered with, not the entire system
- Micro processor operated
- 2 BUS data lines
- DC power line 12V

Features EuroAlarm SL12:

- Each unit secures and displays up to 12 products
- Internal alarm for recognition
- 2 LED indicators
- LED on each port
- I/O line for flash/CCTV
- Memory
- Micro processor operated
- BUS 1/2 data lines
- DC power line 12V (for Show Cases)

Features EuroAlarm MP12:

- Each unit secures, charges and displays up to 12 products
- 12 channel multiplexer
- Internal alarm for recognition
- 2 LED indicators
- LED on each port
- I/O line for flash/CCTV
- Memory
- Micro processor operated
- BUS 1/2 data lines
- DC power line 5V

Features EuroAlarm C6:

- Each unit secures, charges and displays up to 6 products
- 6 channel multiplexer
- Internal alarm for recognition
- 2 LED indicators
- LED on each port
- I/O line for flash/CCTV
- Memory
- Micro processor operated
- BUS 1/2 data lines
- DC power line 12V

Features

- RFID – One Card Solution
- Flexibility equal to a Stand Alone Solution
- Each port can be operated individually
- Power and security in one cable
- Multi-alarm
- Fully protected against sabotage
- Dual-color indication LED on sensor level

Advantages

- Immediately re-programmable by user
- User card is unique to each store location
- Cost effective
- All products are secured at all time
- Improves customer experience
- Fully functional open display
- Attractive and easy-to-maintain display
- Time and labor savings
- Display changes are done above the counter
